

Food & Beverage Services

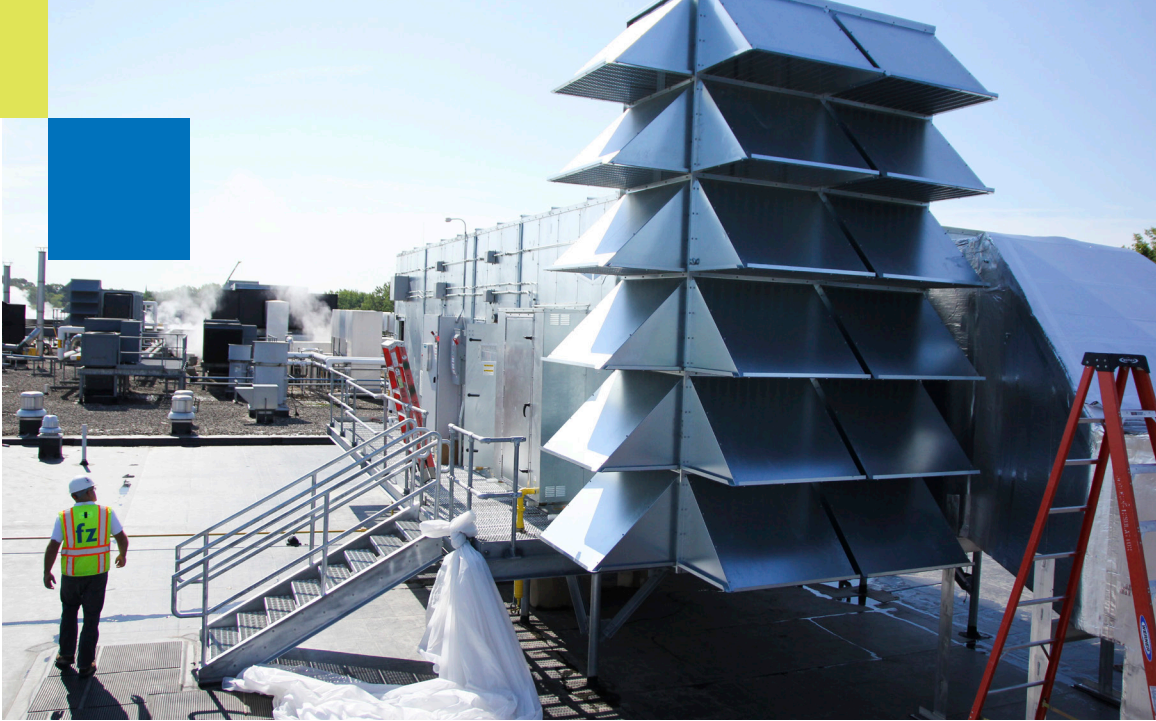

Continuous, Reliable Operations

Our understanding of plant floor safety, quality assurance, regulatory compliance, process innovation, energy efficiency, and cost control paired with over 40 years in the food processing industry, makes us a valuable and reliable project partner. We understand the ever-changing demands of the food and beverage industry and have designed electrical and industrial technology solutions that promote efficiency, sustainability, and reliability while being compliant with food safety standards.

Whether it's working in a regulated environment or designing controls for extruded and dry product lines, we understand the care and precision that goes into building and maintaining systems without interrupting critical plant operations.

Completed Projects

- Ammonia refrigeration controls
- Mixing tanks
- Pet food processing
- Distribution systems
- Extruder installations
- Hopper installations
- Industrial oven installations
- Conveyor system integration
- Plant and line relocation
- Food plant service calls
- Soda and juice bottling plants
- Canned food processing
- Bulk bin feed systems
- Brine mixer systems
- Cryovac systems

Solutions

- Motion controls
- HMI development
- PLC and PC based systems
- Panel design and build
- Design build
- Electrical service
- Voice and data cabling
- Fiber optic cabling
- Paging systems
- Fire alarm systems
- CCTV and security systems
- Access control systems
- Temperature control systems
- Lighting control systems
- Gas detection systems
- Vision inspection solutions
- Plant wide network cabling
- Data collection
- Robotic engineering controls
- Preventative maintenance
- Smart energy decisions
